Professional Profile

Systems Engineer with hands-on experience across full stack development, software quality assurance, and database design, built through two professional internships and a degree in Systems Engineering from Universidad Nacional de Costa Rica. Skilled in React.js, .NET, Spring Boot, Python, and PHP, along with testing frameworks like Jest, Selenium, and PHPUnit. Comfortable working the full path of a feature, from building it in the front end and database, to querying and analyzing the data it produces using SQL, Python, and Tableau. Track record of automating manual processes and cutting operational costs, gained in Agile/Scrum teams. Bilingual in Spanish and English, with a genuine interest in growing further into data analysis and BI work.

Work Experience

Frontend Developer, Professional Internship · **Grupo Eulalia** *Remote*

July 2025 – November 2025

- Built a React.js work order module for a truck repair workshop, turning basic inventory transactions into a full maintenance management system with complete tracking from incident report to job completion.
- Enabled analytics that had not been possible before, including cost analysis per vehicle, mechanic efficiency evaluation, and failure pattern identification, giving management data to make better fleet decisions.
- Automated the cost calculation process so management could see accurate per-job costs in real time.
- Designed the work order system to sit between vehicles and part dispatches, tracking more than 30 active vehicles with full maintenance history.
- Built a driver incident reporting interface so field staff could report vehicle issues directly to the workshop, cutting maintenance decision response time by 40%.
- Reached more than 85% code coverage on React components through consistent unit and integration testing with Jest.
- Used Jira for Agile task management and Bitbucket for version control throughout the development cycle.

Full-Stack Developer, Professional Internship · **Ticotek** *Remote*

February 2024 – July 2025

- Built a shipment control system from the ground up for a technology retail store, covering deliveries, drivers, vehicles, and payment tracking with full traceability.
- Designed a normalized MySQL schema for orders, deliveries, drivers, and vehicles, optimizing queries and cutting average query time by 60%.
- Replaced a manual reporting process that required checking orders one by one with a self-service reporting system, saving more than 15 hours of operational work every week.
- Built a responsive React front end for delivery assignments and driver coordination, supporting real-time monitoring of more than 50 weekly deliveries.
- Built a PHP REST API handling order processing, payment status, and delivery confirmations, with unit tests in PHPUnit and 99% uptime during testing.
- Automated testing with Selenium for the most critical workflows, including order processing and payment confirmation, reaching more than 95% reliability before deployment.
- Set up a Git branching strategy and pull request workflow with a 5-person team, following Agile sprint cycles.

Customer Service Representative · **Foundever** *Heredia, Costa Rica*

August 2021 – February 2023

- Gave bilingual (English and Spanish) support for a major bank's credit card department, handling more than 50 daily account inquiries, disputes, and technical issues across phone, email, and chat.
- Resolved complex billing disputes and fraud cases, reaching a 92% first-call resolution rate and a 4.7 out of 5 customer satisfaction score.
- Worked with cross-functional teams to escalate and resolve technical issues, cutting average resolution time by 20% compared to the department baseline.
- Trained 5 new team members on service protocols, dispute resolution, and banking systems.

Personal Projects

Store Credit Management System · Personal Project (Family Business)

Built and deployed a full stack web app from scratch to replace the paper credit ledger used daily by a family grocery store, currently in active use by store staff.

- Designed a real-time system with Firebase Realtime Database so multiple people can register sales and payments at the same time and see updates instantly on every device.
- Modeled the data for full traceability: nothing gets deleted, every entry keeps a record of who created or edited it and when.
- Built a PIN-based profile system so several family members share one login while every action stays tied to a specific person.
- Added receipt printing formatted for an 80mm thermal printer and a WhatsApp sharing option, matching the store's existing workflow.
- Built automatic WhatsApp alerts so clients get notified on every transaction, using a dedicated WhatsApp number for the store.
- Deployed on Vercel with continuous deployment from GitHub, running entirely on free-tier infrastructure.

Tech: React, Vite, Firebase (Realtime Database, Authentication), Vercel

Education

Universidad Nacional de Costa Rica

- Bachelor in Systems Engineering
- Diploma in Application Programming
- Relevant coursework: Operating Systems, Computer Networks, Data Structures, Databases, Software Engineering

Skills

Languages: Spanish (Native), English (C1, Advanced)

Programming & Development: JavaScript (React.js, Node.js), TypeScript, C# (.NET, .NET Core), Java (Spring Boot), Python, PHP, RESTful APIs, responsive design, Git (GitHub, Bitbucket), Agile/Scrum

Testing: Jest, Selenium, PHPUnit, unit and integration testing, TDD practices

Databases & Data Analysis: SQL Server and MySQL (T-SQL, stored procedures, schema design, query optimization), Python for data analysis (Pandas, Matplotlib), Tableau for dashboards and data visualization, and use of AI tools like ChatGPT to speed up coding and analysis work

Tools: Visual Studio, VS Code, SQL Server Management Studio, Postman, Bash/PowerShell scripting
